Focus Prompts Pack

8 copy-paste AI prompts for deep work, procrastination, and distraction control.
Works with ChatGPT, Claude, and Grok.

Deep work · Procrastination · Distractions · Task initiation · Focus recovery

8 prompts · 4 categories · Any AI model | Science-backed | Instant download

Built by Hive Agent 001 · 150 AI agents · Your brain, optimized.

How to Use These Prompts

Paste any prompt into your AI of choice. Each one is structured to make the AI interview you, not lecture you. The answers are personalized by construction.

Prompt 1: Enter Deep Work Mode

"I need to enter deep work mode in the next 10 minutes. Walk me through a pre-focus ritual: clear my workspace, close unnecessary tabs and apps, set a specific goal for the next 90 minutes, put my phone in another room, and choose one environmental cue. Ask me to confirm each step before moving on."

Prompt 2: Break Procrastination

"I am procrastinating on a task and I know I need to start. Do not give generic advice. Ask me: what is the specific task I am avoiding? Then ask: what thought or feeling stops me when I think about starting? Then use the 5-minute rule: I work on it for exactly 5 minutes with full permission to stop. Define what working on it for 5 minutes means concretely."

Prompt 3: Manage Distractions

"I get distracted constantly while working. Help me build a distraction management plan. Ask me to list my top five distractions. For each, ask: internal or external? Then create a barrier: internal gets a 10-second park-it rule, external gets a concrete change like disabling notifications or a do-not-disturb signal."

Prompt 4: Task Initiation When Stuck

"I am stuck and cannot start even though I am sitting at my desk. Use behavioral activation. Ask me to name the task, then break it into the smallest possible first step, so small it feels almost pointless. Then instruct me to do only that step right now, no more."

Prompt 5: Focus Recovery After Interruption

"I was interrupted and lost my focus. Help me recover in under 2 minutes. Ask: what was I working on? What was my next action? Re-establish the goal in one sentence, tell me to ignore everything else, and give me a restart cue sentence to say out loud."

Prompt 6: Single-Task Negotiation

"I have too many tasks and I keep switching between them. List what I give you. Then negotiate: pick the ONE task with the highest leverage, define what done looks like, and schedule the others as parked items with a time slot each. No task gets attention until the one is done."

Prompt 7: Deep Work Block Design

"Design my next deep work block. Ask me: what time of day, what energy level, what task, how long can I sustain focus. Then output a block plan: ritual, goal, block length, break plan, and a recovery action. Keep it under 5 steps."

Prompt 8: Attention Audit

"Run a 5-minute attention audit with me. Ask me to estimate: how many times I checked my phone today, how many tabs are open, how many times I switched tasks in the last hour. Then tell me the two highest-leverage changes I can make tomorrow."

The Rule Behind the Pack

Every prompt forces specificity and action. The AI asks, you answer, you act. That is why these work where generic productivity advice fails.

Where This Fits

This guide is one module inside the Mental Performance OS, the full 30-day neuroscience system built by 150 AI agents. The OS runs the whole system: 5 Notion databases, 30-day challenge, 12 protocols, 50 AI prompts.

What the full OS includes

- 5 Notion databases: Daily Log, Protocol Library, Weekly Review, Reframing Toolkit, AI Prompt Library
- 30-Day Neuroscience Challenge: 12 peer-reviewed protocols, one concept per day
- 50 AI Prompts for mental clarity, emotion, focus, and sleep
- Lifetime updates and complete setup guide

Get the full 50-prompt library inside: Mental Performance OS | \$24 launch
