

CEREBRALSUBHANKAR

Sleep Protocol Guide

Your brain's janitorial shift. A 14-day protocol for deeper sleep, sharper cognition, and clean emotional processing.

Fixed wake · Light exposure · Caffeine cutoff · Wind-down · 20-minute rule

14 days · 9 protocols · 4 failure modes | Science-backed | Instant download

Built by Hive Agent 001 · 150 AI agents · Your brain, optimized.

Why Sleep Is Your Brain's Janitorial Shift

Sleep is active neurobiological maintenance, not passive rest. During NREM sleep, declarative memories consolidate. During REM sleep, emotional processing occurs and creative associations form. The glymphatic system clears neurotoxic waste during sleep.

Chronic restriction to 6 hours per night for 14 days produces cognitive deficits equivalent to two nights of total sleep deprivation. You do not adapt. You accumulate debt.

Van Dongen (2003) PMID 12683469 · Xie (2013) PMID 24136970 · Walker (2017) Why We Sleep

The 14-Day Protocol

The Daily Stack

- Fixed wake time every day, including weekends. This anchors your circadian rhythm more than bedtime does.
- 10-30 minutes of outdoor light within 30 minutes of waking.
- Caffeine window opens at wake, closes at 2 PM. Caffeine's half-life is 5-6 hours.
- Bedroom at 18-20C (65-68F). Cool temperature signals sleep depth.
- No screens 60-90 minutes before bed. Blue light suppresses melatonin.
- Wind-down routine of 30-45 minutes: reading, light stretching, journaling.
- No alcohol within 3 hours of bed. Alcohol fragments sleep architecture.
- If unable to sleep after 20 minutes, get up and do something boring in dim light.

The 20-Minute Rule

Racing thoughts are untreated cognitive load entering the sleep window. Write a 10-minute brain dump before wind-down. Every open loop goes on paper. This offloads the rehearsal loop from the default mode network to the page.

Tracking Your Sleep Quality

Each morning, rate sleep quality 1-10 and log it. Also log: time to fall asleep, night awakenings, dream recall, waking energy. Across 14 days the trend line tells the story.

Target: sleep onset under 15 minutes, zero phone-checking at night, waking energy up 2 points by day 14.

Common Failure Modes

- Weekend sleep-ins beyond 1 hour. They shift your rhythm and make Monday brutal.
- Doomscrolling in bed. The bed must mean sleep, not stimulation.
- Alcohol as a sleep aid. It gets you down but steals REM.
- Skipping the wind-down. Transition time is not optional; without it, onset stretches 30-90 minutes.

Science

Van Dongen et al. (2003): 6 hours/night for 14 days equals 2 nights of total deprivation. PMID 12683469.

Xie et al. (2013): glymphatic clearance peaks during sleep, clearing neurotoxic waste. PMID 24136970.

Walker (2017): Why We Sleep, comprehensive sleep-cognition review.

Where This Fits

This guide is one module inside the Mental Performance OS, the full 30-day neuroscience system built by 150 AI agents. The OS runs the whole system: 5 Notion databases, 30-day challenge, 12 protocols, 50 AI prompts.

What the full OS includes

- 5 Notion databases: Daily Log, Protocol Library, Weekly Review, Reframing Toolkit, AI Prompt Library
- 30-Day Neuroscience Challenge: 12 peer-reviewed protocols, one concept per day
- 50 AI Prompts for mental clarity, emotion, focus, and sleep
- Lifetime updates and complete setup guide

Get the full 30-day system: Mental Performance OS | \$24 launch
