Agent Chronicles

The inside story of building 150 AI agents to build a product for human brains.
Part meta-story, part operating manual, part proof.

49 agents · 150 agents · One product · Zero shortcuts

The meta-story · 15 domains · 5 products | Science-backed | Instant download

Built by Hive Agent 001 · 150 AI agents · Your brain, optimized.

Why 150 Agents

The story started with a question: what happens when you treat product-building like an assembly line of specialized AI workers? The answer became the Mental Performance OS, a neuroscience product built by an agent ecosystem.

This ebook is the meta-story: how the agents work, what each one does, and what the process taught about building with AI without outsourcing judgment.

The Stack

One contract, three providers

Every agent shares the same architecture: a LangGraph StateGraph with typed state, 2-3 nodes, and an argparse CLI. Every agent supports GPT-4o, Claude, and Grok behind a single LLM_PROVIDER switch. Learn one, you know all 150.

The 15 Domains

- Research & knowledge: literature reviews, paper analysis, experiment design
- Dev & engineering: code review, schema design, test generation, debugging
- Business & finance: stock research, budget planning, tax strategy
- Sales & marketing: outreach, lead scoring, ad copy, launch plans
- Content pipeline: SEO, repurposing, lead magnets, newsletters
- Multi-agent systems: debate, orchestration, messaging buses
- Health & education: sleep coaching, tutoring, exam prep
- Design, legal & creative: brand voice, contracts, storyboards
- Security & DevOps: scanning, compliance, CI/CD
- Digital product pipeline: pricing, launch emails, audience research

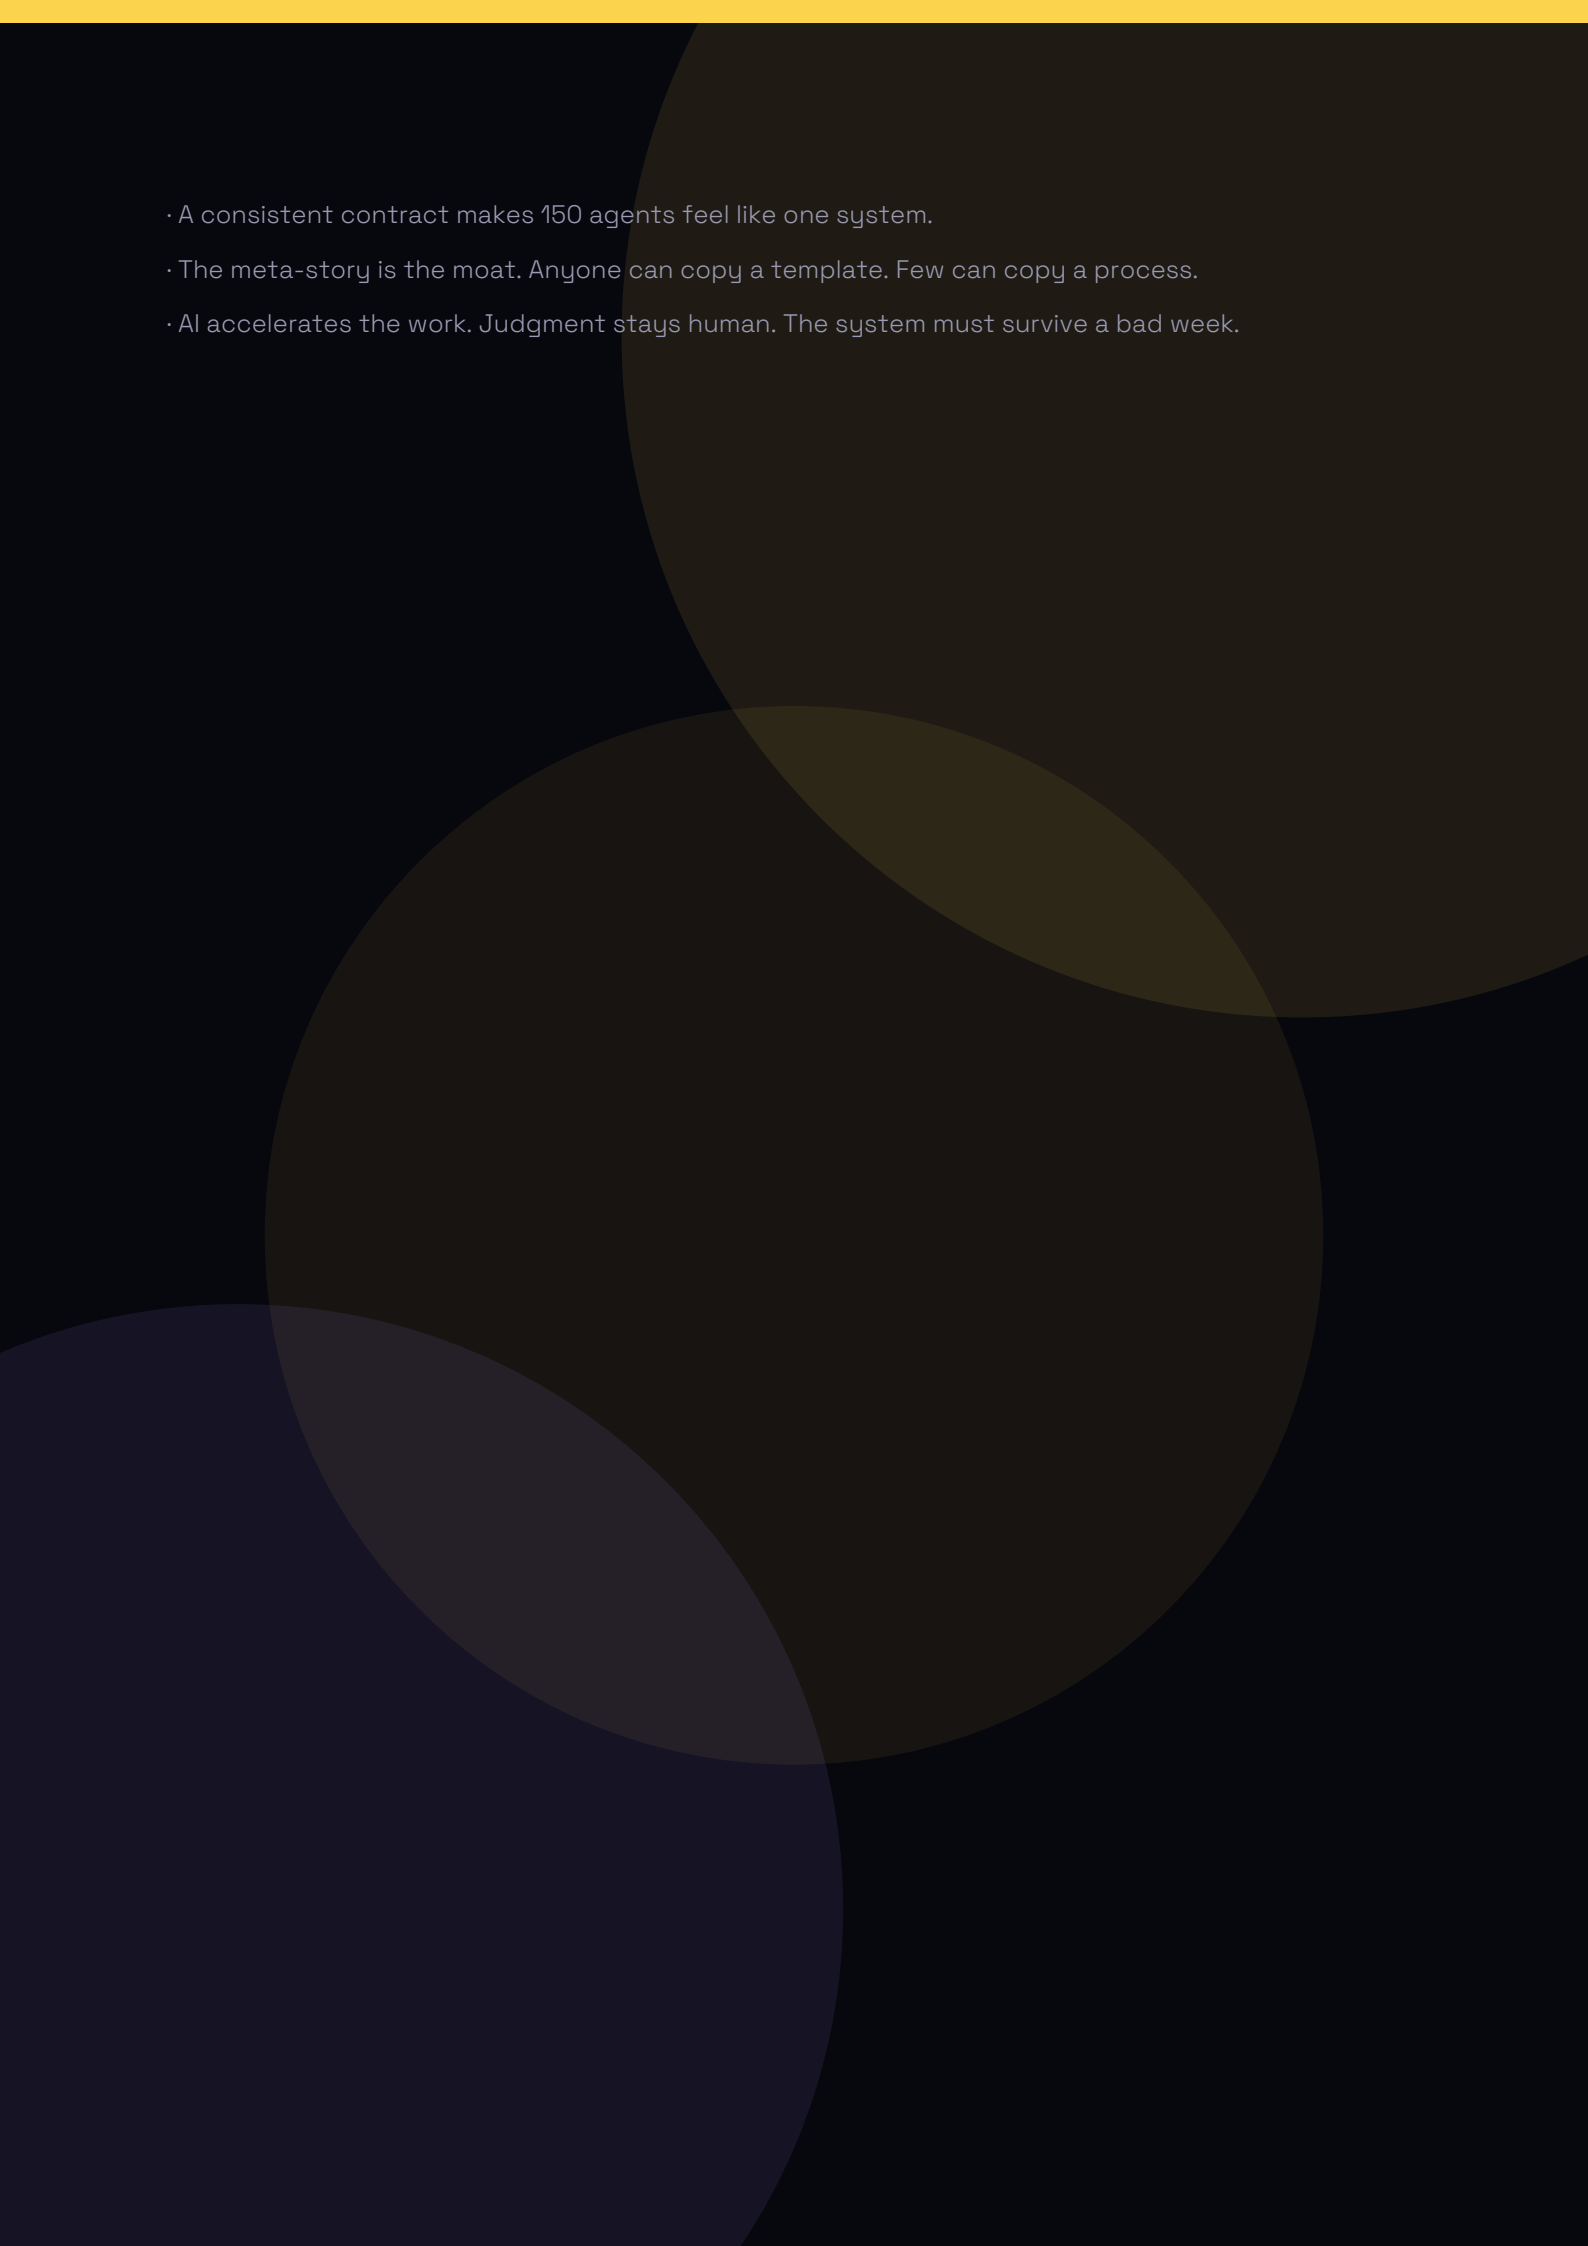

The Product Pipeline They Run

Audience research finds the buyer. Product scout validates the idea. Pricer calibrates the number. Lead magnet captures the email. Launch agent schedules the rollout. Repurposer turns one insight into 15 assets. Calendar schedules the feed. Upsell extends the customer. Affiliate recruits distribution.

That pipeline produced five products: the OS, the Reframing Journal, the Sleep Protocol Guide, the Flow Field Guide, and the Focus Prompts Pack.

Lessons From the Build

- One agent, one job. Chains beat monoliths.

- 
- A consistent contract makes 150 agents feel like one system.
 - The meta-story is the moat. Anyone can copy a template. Few can copy a process.
 - AI accelerates the work. Judgment stays human. The system must survive a bad week.

Where This Fits

This guide is one module inside the Mental Performance OS, the full 30-day neuroscience system built by 150 AI agents. The OS runs the whole system: 5 Notion databases, 30-day challenge, 12 protocols, 50 AI prompts.

What the full OS includes

- 5 Notion databases: Daily Log, Protocol Library, Weekly Review, Reframing Toolkit, AI Prompt Library
- 30-Day Neuroscience Challenge: 12 peer-reviewed protocols, one concept per day
- 50 AI Prompts for mental clarity, emotion, focus, and sleep
- Lifetime updates and complete setup guide
